SUMMARY

Engineer with 2+ years on an enterprise development working across development, testing and production support with business and technical teams. Strong in stakeholder coordination, process automation, clear documentation and training others. Targeting program management.

ACHIEVEMENTS

- Ran a workshop for the entire after-sales portfolio on taking new elements to production, covering approvals and monitoring
- TCS Digital: **1,500** points in the WINGS-1 technical assessment
- Awarded "Awarded Best Outgoing Student (2023–2024)", selected from the entire final-year graduating batch across all departments of the college.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services Sept 2024 – Present

Assistant System Engineer | Software Developer, EDI Invoicing Platform

- Managed end-to-end release workflows and cross-functional requirements, aligning 7+ stakeholders on element-level mappings and agreed layouts before development and testing.
- Coordinated production support, traced root causes of invoice processing anomalies, and resolved critical data issues to maintain operational continuity.
- Designed and executed automated batch jobs independently for the finance team, overseeing the lifecycle from initial requirements through end-to-end testing.
- Accelerated delivery timelines by 90% (reducing analysis from 14 hours to 2) by leveraging generative AI and Copilot to compare baseline versus client-specific implementations

Savemom Jan 2024 – May 2024

Data Analyst Intern

- Introduced Tableau to a team building Excel dashboards by persuading my manager to adopt it.
- Presented insights to stakeholders and built recurring dashboards for the team's weekly calls, producing **two** recurring reports.
- Prepared **300**+ maternal health records for reporting by cleaning and validating them and digitizing **30**+ handwritten pages; worked with healthcare professionals to standardize reporting and maintain master datasets.

PROJECTS

Customer Churn and Business Insights Copilot GitHub | Live app

Python, Pandas, Plotly, Streamlit, Groq API (Llama 3)

- Scope & Requirements Management: Authored a formal Business Requirements Document (BRD) outlining target personas and functional requirements to translate stakeholder needs into a structured, production-ready analytics pipeline.
- Process Automation & Metrics Tracking: Architected an interactive, enterprise-grade Business Intelligence application utilizing Python (Pandas, Plotly, Streamlit) and the Groq API (Llama 3) to instantly analyze churn drivers and revenue exposure across 7,000+ subscriber records.
- Deployment & Risk Mitigation: Managed the end-to-end delivery lifecycle and deployment to Streamlit Cloud, implementing zero-exposure secret management to safeguard sensitive API credentials and secure data operations.

TECHNICAL SKILLS

Program and Delivery: stakeholder coordination, process documentation, knowledge transfer and training, production monitoring, requirements analysis, sprint-based delivery, process automation, metrics and data reporting, root cause analysis

Data and Tools: SQL, Python, Pandas, Excel, Tableau, Power BI, Plotly, GCP

Generative AI: LLM prompt engineering, Copilot, Groq API (Llama 3), Hugging Face Transformers

Currently Developing: program management frameworks (risk registers, escalation processes), supply chain fundamentals

EDUCATION

K.L.N. College of Engineering Oct 2020 – Mar 2024

B.E. Electronics and Communication Engineering *CGPA: 8.85*

CERTIFICATIONS

Google Generative AI Leader | Claude Certified Associate - Foundations (CCAO-F) | Google Data Analytics | Cisco Data Analytics Essentials
